Infra Informatics (Infrainformatik)
Module: Simulation methods

For the computer lab assignment we will use the software PTV Vissim. It is available in several of the computer rooms at LiU (TP4003, TP4004 and TP4005), but probably easier if you install and run the software on your own computer.

How to run the software in a computer room using remote desktop

You can access Vissim by connecting to the University computer rooms.

1. Go to https://rdpklienter.edu.liu.se/?l=en.
2. Select Täppan:

3. Vissim is installed at TP4003, TP4004 and TP4005. Select one of these three rooms:

4. Select an available computer (green color / “ledig”) and open the downloaded .rdp file.
5. Press connect and enter you LiU credentials.
6. You are now connected to a University computer.
7. Start PTV Vissim 2026 from the Windows start menu.

How to install the software on your own computer

- **How to install and connect to LiU via VPN (**not necessary if you are on Campus and on the wired network**):** See https://liuonline.sharepoint.com/sites/intranet-it/SitePages/en/VPN.aspx

- **How to install PTV Vissim:**
  1. Download Vissim from Vision Setups (ptvgroup.com). The lab have not been tested with the latest versions of Vissim yet so it might be good to use the 2024 version.
  2. Install Vissim (i.e. contact IT to get it installed).

- **How to set up the connection to the license server**
  1. If not on LiU network Start the VPN-connection to LiU
  2. Try to start PTV Vissim, it will fail and it will open another program called License Management, click on the edit settings symbol (gear/kugghjul).

3. Press the plus and add ptv.license.it.liu.se and then press close
